

Main c report

```
1 //Brooke Alfred
2 //Assignment 1
3 //CS 3503
4 // Srilekkha Dodda
5 //Section 2

7 // just a preface, we were not taught C or C++ we were only taught java, I had no clue where
to start on syntax so. I used Google for the majority of this assignment
8 // I will reference everything I looked up and why I looked it up

14 // Original number

22 // Left shift by 3

30 // AND with 0xFF
32 //followed skeleton provided in assignment instructions

43 // counter to count how many tests passed
44 //counting the total amount of tests

46 //skeleton provided in instructions

57 // used google to reference the symbols for null in this line of code I am eliminating the empty
spaces, and comments in the test file

62 // array made to signify the functions listed in the document
63 // the input for the converting functions referenced as n originally
64 //same as convert.c
65 //expected is the array made for the numbers that are given in the test file that are supposed
to be passed on
66 // output is the same as out for convert c. I upped it to 512 because of the large numbers in
the test file (same for expected)

68 // Looked up on google how to scan in data from the file. I specifically looked for it similar to
how the text from print tables is formatted.
69 //i wanted to create it to where it automatically looks at the test in the file and it looks for the
numbers in the text so i could break it up,
70 //similar to how ypu could use a delimiter in java to break up a string into an array

72 // I looked up the way to compare strings in C and this function came up.

75 // if the function array is equal to div_convert, then run the test.
```

79 //same as the one before it

82 // if not go to the next line

85 // put a count on the overall score

87 //using string comparison again to show that the outputs are the same if they match they pass, if not they fail

100 // Because print tables only has two arguments for this one we do the same check but make it specific for that method

101 // i could not figure out how to do the test formatting for this one, I tried using sprintf but everytime i did that it crashed my program

104 // prints out the n value

106 // all are counted as passes because all of them are formatted in a specific way + the file does not explicitly state the numbers, just if its formatted

110 // skeleton code

112 // Summary of results

113 // done according to assignment guidelines

116 // because this is a method something has to be returned.

Convert.c report

4 //Brooke Alfred

5 //Assignment 1

6 //CS 3503

7 // Srilekkha Dodda

8 //Section 2

10 // Temporary buffer

12 // Handle zero case

18 // Extract digits from right to left

22 // Convert digit to character

29 // putting the digits from bottom to top in an array

33 //start from the last character in the array

39 // Temporary buffer

41 // Handle zero case

47 // Extract digits from right to left

48 //looked up unit_64_t my code kept crashing during the testing because the 32 bit was not big enough. Parsed it to that to make it run smoothly

70 // putting the digits top to bottom in the array

74 //start from the last character in the array
